# Virtual Card Payment Platfrom

1. Client server architecture model

2. Redis is like a short memory that helps the system work faster. Instead of checking the main database every time, Redis keeps temporary copies of common data.

3. Overall diagram:

4. Programming languages to use:

-Backend: Node.js- fast and easy to work with API
-Frontend: Flutter- one app for Android and Iphone
-Database: PostgreSQL- save and reliable for money data
